

# IntelliBlock Project Documentation

## Overview

**Project Title:** IntelliBlock: AI-Powered Moving Block Train Traffic Control for Maximizing Indian Railway Throughput

**Objective:** Implement a proven global moving block signaling system integrated with AI-based traffic optimization to increase section capacity by 30-50%, leveraging existing Indian Railways data and APIs.

## Key Innovations

### 1. Moving Block Signaling System

- Continuous train supervision enabling dynamic safe train spacing
- Proven deployments: London Underground, Singapore MRT, Hong Kong MTR, NYC Subway [124]
- **Resources:**
  - Wikipedia: Moving Block signaling – [https://en.wikipedia.org/wiki/Moving\\_block](https://en.wikipedia.org/wiki/Moving_block)
  - IRISet NextGen ATP article – <https://iriset.railnet.gov.in/content/gyandeep/2017/7-article.pdf>

### 2. AI-Powered Optimization Algorithms

- Reinforcement learning and constraint programming for dynamic routing and priority decisions
- Proven in Hitachi Rail's HMAX and Deutsche Bahn CTMS projects [7][37]
- **Resources:**
  - NeTrainSim (Open-source network simulator) – <https://github.com/VTI-CSM/NeTrainSim>
  - Train-Ops-Sim (RL scheduling) – <https://github.com/japlete/train-ops-sim>
  - Gurobi dispatching example – [https://www.gurobi.com/jupyter\\_models/railway-dispatching/](https://www.gurobi.com/jupyter_models/railway-dispatching/)

### 3. CRIS API Integration

- Leverage existing Railway APIs for real-time schedules, train positions, and station data
- **Resources:**
  - CRIS API overview – <https://wso2.com/customers/cris-revolutionizes-indian-railways-wso2/>
  - Indian Rail API developers – <https://indianrailapi.com/developers>

- Public API docs – <https://docs.railway.com/guides/public-api>

#### 4. Simulation & Dashboard

- Use OpenTrack & NeTrainSim for simulating Indian sections
- Develop web dashboard (React + D3.js) for controllers
- **Resources:**
  - OpenTrack simulation – [https://www.opentrack.ch/mobile/opentrack\\_e/opentrack\\_e.html](https://www.opentrack.ch/mobile/opentrack_e/opentrack_e.html)
  - React documentation – <https://reactjs.org/docs/getting-started.html>
  - D3.js tutorials – <https://d3js.org/>

### Technical Stack

- **Backend:** Python, Flask/FastAPI
- **Optimization:** Pyomo, Gurobi/CPLEX
- **ML Libraries:** scikit-learn, TensorFlow/Keras, XGBoost
- **Database:** PostgreSQL
- **Frontend:** React, D3.js, WebSocket
- **Cloud:** AWS/GCP/Azure student credits

### Implementation Phases

#### Phase 1: Core Prototype (Hackathon)

1. Data integration via CRIS APIs
2. Moving block simulation on sample section
3. Basic optimization algorithm (heuristic)
4. Web dashboard prototype

#### Phase 2: AI Enhancement

1. Reinforcement learning-based optimization
2. Real-time data handling via WebSocket
3. KPI dashboards (throughput, delay metrics)

#### Phase 3: Production Readiness

1. Full CRIS integration and security
2. Scalable cloud deployment
3. Mobile interface for section controllers

  - Indian Railways Statistical Statements – [https://indianrailways.gov.in/railwayboard/view\\_section.jsp?lang=0&id=0,1,304,366,554](https://indianrailways.gov.in/railwayboard/view_section.jsp?lang=0&id=0,1,304,366,554)

## Team Roles & Tasks

- **Backend Developer:** API integration, optimization engine
- **ML Engineer:** Develop and train RL models
- **Frontend Developer:** Dashboard and visualization
- **DevOps Engineer:** Cloud setup and CI/CD
- **Domain Expert:** Guide railway signaling and safety requirements

## Communication & Collaboration

- **Repo:** [GitHub Organization]
- **Project Board:** [Trello / Jira link]
- **Meetings:** Twice-weekly sprint planning
- **Documentation:** Confluence / Notion page

**Let's build IntelliBlock and revolutionize Indian Railways traffic control!**
